Lab - promises

In this lab you will practice using promises

Dependent Chained calls first A then B then C

This exercise is about learning how to create a chained call. We will do two chained calls.

1) First we fetch a user..

```
http://localhost:PORT/user
```

Parse out the user id and then we use that user id when we perform our next query.

2) Fetch orders based on that user

```
http://localhost:PORT/products/:userId
```

Fetching orders that that user created.

All necessary sample code in angular will be created for you.

Calls with error handling, try error callback, try the catch method

This part is about learning how to handle errors when using $http service. Learn to differentiate between an errorCallback and a catch

All necessary sample code in angular will be created for you.
